DUNCAN, ARIZ.

A Mexican Run Over While Asleep On the Track.—Rev. W. S. Huggett, Formerly of El Paso, Preaches His First Sermon—Texas Farmers Coming to the Gila Valley.

Special Correspondence of the HERALD.

DUNCAN, Ariz., Oct. 30.—On Saturday night a Mexican brick layer while intoxicated fell asleep on the railroad track in Clifton and was run over by a switch engine. His body was mangled in a horrible manner, the remains being picked up in a basket.

Thursday morning a freight train on the A. & N. M. Ry in charge of Conductor McDowell was running at a high rate of speed, and the engine left the track rounding a curve after passing through the first tunnel near Clifton. The engine and four cars of Mexican lumber were badly wrecked and Fireman Thomas Sidesbotham seriously injured. Engineer Geo. Freeman escaped with only a few scratches. The engine and cars stopped within a few feet of a bridge seventy feet high.

Our Postmaster, J. L. T. Watters, left Saturday for Kansas City, and while there Mr. Watters will purchase for himself an artificial leg, and it is predicted after his return that he will stand a better show of winning first prize at the many kicking contests held at Duncan. Mrs. Gracie Brooks is acting postmistress during Mr. Watters' absence.

The ball given by the young people of Duncan Friday night was excellent. Stewart's hall was filled with lovers of the Terpsichorean art. The program was varied, being flavored with old Virginia reels, etc. The music was furnished by the Duncan string band and was good.

The Rev. W. S. Huggett of El Paso has been assigned to the Gila river circuit and preached his first sermon at the M. E. church here Saturday night.

This valley is experiencing an influx of Texas farmers and stock men, which is evidenced by long trains of movers in wagons from Llano and Uvalde counties.

W. Hollingsworth, of the S. P. Co. at Lordsburg, was here Tuesday.

G. M. Nicks is in Denver.

W. Phillips has returned from mine at Ash Springs.

Dr. W. A. Graham was in Lordsburg this week.

Dr. Henry Davis has returned from Guaymas, Mexico.

DENVER, COLO.

Election in Arapahoe County That Will Have a Significant Bearing On the National Campaign—Prominent Irishmen Expected in Denver.

Special Correspondence of the HERALD.

DENVER, Colo., Oct. 30.—An election for county offices takes place in this city and county on Nov. 7. The result will undoubtedly show an astonishing change of sentiment in favor of the republican administration even should the straight republican ticket not be elected. Though purely a local affair, the result of the forthcoming election in this, the banner silver county in the United States, cannot but have a significant bearing on the national campaign of a year from now.

Governor Thomas and others at the head of the democratic party in this state realized this when they made their strenuous effort of a few weeks ago to bring about another fusion of the silver and the same combination that put Mr. Thomas in the gubernatorial chair.

The effect was not successful and the result is, a three-cornered fight is now on in Arapahoe county and the democratic will have to do battle with their old time enemy without the aid of the so-called silver republican and populists.

A large-sized mob of dissatisfaction arose over the parcelling out of the offices between the three parties opposed to republicanism, hence the borrowing of iron between these hitherto friendly neighbors has come to a sudden stop.

The silver republicans and populists have agreed to be confined together in the back yard while the democratic party can wear out its other lung alone "hollering down its own rain-barrel" if it enjoys this pastime.

This division leaves the republican managers in a jubilant frame of mind. They could not hope, of course, to be in the race against the combine of the three other parties, but are now sanguine that they can carry the election of next week.

Their enthusiasm comes as a result of the large defection from the silver republican ranks over to the straight republican party, which has been in daily evidence for some time and became like unto a stampede when the effort to bring about a fusion resulted in a signal failure.

When it is known what an exceedingly small number of votes the republicans in this county and city were enabled to muster in 1896, because of the strong silver sentiment then prevailing here, the showing they are now making is truly remarkable.

In precinct 2 of district O on the south side in 1896 there were just seven votes cast for the republican ticket. Last fall there were 88 votes in this precinct for the republican nominee for governor. In the canvass to secure registration, just completed, of the 202 voters, 192 came out emphatically in favor of the straight county republican ticket. "Times change and the people's minds change with them."

Woman suffrage may be a failure, as some are wont to believe, but if the scoffer could no longer take interest in the women of Denver in the public meetings are election held in the city, he might change his decided opinion on this question. Of course there is large room for criticism at present, but then who can say but in time we shall look upon the question

of women voting as a thing that should be.

Will the granting of the franchise to them be a means ultimately of purifying the ballot or will their taking advantage of it reduce one jot the great respect naturally held for them by the opposite sex?

This question was asked before equal suffrage was granted in this state. It still remains unanswered. It has made men of some women, but the others remain the same womanly women they were before. They have gained a knowledge of civil government and some other things outside their homes by mixing in politics not known before.

Men are still soliloquizing on the propriety of women voting. In the meantime their little ballots are changing election results.

Marion F. Rittinghouse of El Paso and Dicie McAllister of Denver procured a license in this city to wed the other day.

In the case of Fred Wolf, an old man confined in the county hospital, many Denver physicians think that a genuine case of leprosy. An examination is to be held shortly to determine just what disease Wolf is suffering with.

Lord Mayor Tallon of Dublin and Hon. J. E. Redmond, M. P., are expected in Denver shortly to lecture in aid of a fund to build a monument to the memory of Parnell.

Here is the topic in many of Denver's pulpits at present, this being brought about by the recent debarment of Rev. Henry Pinkham of the Baptist church because he refused to swallow the whole story and spoke in opposition to some of the tenets of the Baptist faith. Mr. Pinkham still holds service in Little Bethany church and his congregation stays with him.

The State Federation of Women's clubs held a largely attended meeting here during the week. To say that they had the key to the city would be but stating a self evident fact. They always carry it.

Water is the leading topic here now, the question of the people owning their own supply causing the talk, while El Paso seems to be more interested in a new brewery. May both cities get what they are after.

There is some abatement of epidemic high grew to the quite an epidemic in some parts of the city. Many cases were attributed to the use of impure milk.

In the opinion of Bishop Leonard of the Episcopal church of Salt Lake, who stated such an opinion in an interview here, "polygamy will receive its death blow if Congressman Roberts fails to retain his seat."

PICACHO, N. MEX.

Cold Wave—District Court Adjourns Owing To Lack of Funds—Mail Hacks Crowded With Visitors On Business.

Special Correspondence of the HERALD.

PICACHO, N. M., Oct. 28.—The cold wave that struck this section from the east last night makes the people feel like appropriating their heavy wearing apparel.

The district court of this county adjourned on the 25th inst., after a ten days' session and before the docket was cleared, but could hold no longer on account of no more friends.

The mail hacks on this line are crowded with passengers from both east and west.

Messrs. Patterson and Carrier, from Lone Elm, Kas., who are interested in some mining property near Nogal, N. M., were guests at Picacho hotel on their return home, and from their conversation with the writer, he is led to believe that they have "struck it rich" and will soon return.

I. C. Sanchez, of Carlsbad, N. M., who is representing the New York Equitable society, stopped at Picacho Wednesday night on his way, via El Capitan, N. M., to El Paso, Tex. He reports business good in his line, and says the people are more fully realizing the necessity of life insurance.

V. M. Ward, of F. L. Davis, Tex., will be over today at Picacho hotel, on account of the down stage being loaded to its utmost with passengers before reaching this station.

NEW SMELTER

Promised For Pima, Ariz.—Several Big Mining Deals On Hand.

Special Correspondence of the HERALD.

PIMA, A. T., Oct. 27.—Thomas McEnery and party returned to New York City yesterday after having visited their various prospects in Arizona. He has quite a force employed at the several claims and his manager, W. B. McBride, says they are showing up better every day.

The White Eagle Mining Co., of which Mr. McEnery is manager, promises to erect a smelter, and has obtained a suitable location from the city as a bonus. He also proposes to tunnel into Old Graham and pipe the water a distance of eight miles to supply our city as well as the smelter with water. This has heretofore been a drawback to our city. There are several big deals on hand by Thos. Lamb, Colvin Bros., Wiley Holliday, J. McPherson and Joe Bull.

Colvin Bros. have just closed a deal through G. S. Holliday for a group of claims wherein the first payment was several thousand dollars. Joe Bull says the "mother vein is a rich one, and after looking at various specimens brought me I am not sure but what some of the above people are "up against the real thing now."

MALAGA, N. MEX.

Struck a Salt Deposit While Drilling For Artesian Water—Outlook for a Good Beet Crop.

Special Correspondence of the HERALD.

MALAGA, N. M., Oct. 28.—While drilling a well near Francis, N. M., at a depth of 200 feet the drillers

struck a deposit of salt instead of artesian water. The promoters are now discussing the practicability of a salt mine.

Farmers will begin harvesting the beet crop in the valley about the middle of this month. The outlook is better now than was anticipated, and fields that were considered poor are now in condition to reward the farmer for his labor.

The irrigation season mostly over and little water being used, the P. F. & I. Co. have suspended their ditch-rider at this point, his territory being added to that of the one north, with one ditch-rider for both until the spring rush starts.

A prominent farmer in this vicinity, three years ago decided to invest in stock cattle on borrowed capital, with the result that he has now made one hundred per cent on his investment. He is this fall planting thirty acres to Johnson grass for the purpose of fitting cattle for home markets.

HILLSBORO NEWS

William Thurmond Talks About His New Concentrator and Tells All About Its Workings.

Special Correspondence of the HERALD.

HILLSBORO, N. M., Oct. 26.—Hearing that the eminent inventor Wm. Thurmond was contemplating the erection of a concentrating plant at El Paso, Texas, a HERALD correspondent, in view of the fact that Mr. Thurmond had lately received letters patent on a dry concentrator, which is supposed to revolutionize that class of reduction, called to get his views on concentration of ores, which will be read with great interest by mining men, wherever they may be. He said as follows:

"There has been countless thousands expended to improve on the jig, which is about the oldest and perhaps the most successful concentrator used, to date. It has been slightly improved since it was first invented. Originally it was on oblong box, whose bottom was composed of a coarse or fine sieve, as the occasion required. Upon the bottom was placed a bed of crushed galeas, too coarse to pass through the sieve. The material to be concentrated was placed in the box upon the bed, that was resting upon the sieve. The above device was suspended at the end of a forked spring pole, at the same time immersed in a tank of water sufficiently deep for the surface of the water to cover the ore. At the other end of the spring pole was a man suspended by his hands, and on tip toe. When it was desired that the jig should be operated, all that the partially suspended man had to do was to spring up and down on his tip toes, which gave the motion to the jig. It required some practice, and a good deal of skill to give the proper motion to the jig to obtain the best results. A short, quick motion for fine ore, a somewhat slower and longer motion of the man for coarse ore required."

Mr. Thurmond then proceeded to illustrate the present power, or steam jig, differing from the above tip-toe manipulation, in that the water is jiggled instead of the box, by the means of plungers, and the walet is carried off by water, instead of being scraped off by hand. Mr. Thurmond then launched forth in a tirade against slime tables and endless belts, and said they were not worth the room or floor space on which they were placed. Nobody but stock manipulating concerns used them and all well managed mines and mills had jigs.

"There are," said he, "scientific principles that if properly applied in dry concentration are destined to supersede all wet concentration. Although there have been many failures to date, I have invented and patented a concentrator on these principles that when once known will always be used, not only for lead and zinc ores, but for all classes of low grade gold and silver ores. I am going to New York first, then in all probability I will set up a plant at El Paso, where I can purchase and superintend the erection of a trial, or advertising, mill. After thoroughly experimenting, I will then on adjustments only, at my trial mill at El Paso, I will move it to some low grade dump in Arizona; if possible the dump of the vulture properties, where every known process has failed, although the values are there. I know I will succeed; there is no such thing as failure with my machine. Air at sea level has a pressure of 14.7 lbs. per square inch. I have that pressure to a vacuum always at my command. I invite discussion and am eager and able to cross swords with any and all scientific men, that have penchants for dabbling in concentration. All communications should be addressed to me at Hillsboro, New Mexico."

BLUEWATER, N. M.

How It Derived Its Name—Opportunity For Settlers—Stock Shipments.

Special Dispatch to the HERALD.

BLUEWATER, N. M., Oct.—Bluewater derives its name from that pale color of the Bluewater creek which, rising in Zuni mountains twenty miles away, comes out near the town from a box canyon whose towering walls are a zig zag out of eighteen miles through a maze. A dam at the head of the canon can store water for thousands of acres. The Bluewater Land and Irrigation company have many acres of farming land under fence. This flat or valley, many miles in extent, will yet be the site of hundreds of prosperous and contented homes, for industry is all that is needed to raise as fine a cereal and root crop here as any spot in the west. Cattle are looking fine. Thomas Bryan, well known in this and the San Juan country, shipped five carloads of sheep a short time ago.

Today the Colorado and Arizona sheep company shipped seven double decked cars of sheep to eastern parts 2,100 in all. Mr. Huling superintended the loading of the same.

The manager of the Bluewater Land and Irrigation company contemplates

dehorning some of the fine breed of cattle on their ranch, recently having received from the east a complete set of tools for that purpose.

The good people of this place were considerably wrought up a short time ago by the cowardly poisoning of a couple of inoffensive pet dogs.

PEARCE, ARIZONA.

Cononer Holds An Inquest Over the Body Of Robertson—Witness Testifies That Robertson Received All Five Shots In the Back—Witness For Defense Testifies That Robertson Carried A Gun and Described It Minutely, But When the "Supposed" Gun Of Robertson's Was Produced, Could Not Identify It—It Is Said the Killing Was For A Fixed Purpose—General News Notes.

Special Correspondence of the HERALD.

PEARCE, Ariz., Oct. 30.—At the coroners inquest, held by W. D. Monmonier, (ex officio coroner), about eight or ten of our most reliable citizens testified that Mr. Robertson was standing outside of his place of business and wholly unprepared for any trouble while one witness asserted most positively that he received all of the five shots in the back. The witnesses for the defense are a cowboy, two gamblers and a roustabout. The evidence of the latter so conflicting that most people believe he will go to pieces when cross-examined. Of the other 3 witnesses the less said the better. One of them left town suddenly and the officers are searching for him. It is rumored, though the rumor can not be traced to its source, that he was requested by a committee to "pull his freight."

The defense produced a witness, who claimed he knew the gun carried by Robertson, and described it minutely. He also claimed to have seen a gun drop from Robertson's hands. The prisoner's gun and the gun that was "supposed" to have dropped from Robertson's hand were then placed before him. He could not identify either gun and so swore in court.

The question is whose gun was it? A startling incident occurred which lends weight to the rumor that the killing was for a fixed purpose and that is, the S. P. detective who is working on the Cochise hold out put in his appearance the morning after the killing. He has his men spotted but is not yet ready to gather them up.

It would not be right to give the names of the suspects, though they are all within a radius of thirty miles of Cochise and when the round up takes place, most people will be surprised. It will be like lightning from a clear sky. They are all spotted and dare not leave the territory.

Mr. Robertson's body was placed in A. O. U. W. hall here and shipped to Tombstone and buried from the A. O. U. W. hall at that place on the 25th inst. Mark Smith, a personal friend of the deceased, has been retained to assist District Attorney Land in the prosecution, and from all appearances the friends of the deceased, and they are legion, intend to see that justice is done. His memory will be kept alive by the people.

The lawyer for the defense is Allen R. English of Tombstone. Court adjourned for the term on Friday morning last, and there was a large amount of business done during the term. Judge Leland holding court for the first two weeks and Judge Parker the last two.

The bar and people were very favorably impressed with Judge Leland, who came here a stranger, but when he left he parted with many friends. He and Judge Parker are two of the youngest judges on the bench, but both absolutely satisfy the bar and the people generally of the integrity of their intentions and ability as jurists.

GENERAL NEWS NOTES.

The Rev. T. Verily has been appointed to preach here and at Wilcox on alternate Sundays. He is a Methodist preacher.

Mr. J. Mast of El Paso will soon leave for home, he has about finished his work building around the boilers.

R. P. Bechard, a former resident of El Paso and the smelter, has taken temporary charge of Norton & Morgan's store at Cochise.

Prof. Wood, the blind violinist, will give an exhibition at the opera house tonight.

HENRIETTA, TEXAS

Good Rains Make Farmers Happy.

Special Correspondence of the HERALD.

HENRIETTA, Texas, Oct. 28.—The people of Clay county were agreeably surprised in seeing the ground soaked with a steady rain which continued two days without ceasing.

The farmers who have sowed their wheat for the coming season are happy and others are preparing the soil for heavy crops of wheat and oats.

E. H. Love, district manager of the Woodman of the World lodge, has been in Henrietta a number of days. The other night he delivered a free lecture to a large and appreciative audience in the Carver opera house and is doing considerable in increasing the membership of the lodge.

MONTICELLO, N. MEX.

Navajos Selling Meat and Blankets—Farmers Moving In For the Winter.

Special Correspondence of the HERALD.

MONTICELLO, N. Mex., Oct. 29.—The Navajos have been in town for the last two days selling meat and blankets. They always meet with a good demand for meat when they come. Manuel Sanchez and wife and Jose Francisco and wife went to Paraje today to the funeral of a relative.

The farmers living along the creek out of town are moving to the plaza for the winter. Alphonse Bourguet is the happy father of a baby girl; mother and babe are well.

Bulbs, hyacinths, tulips, crocus, narcissus, etc. Mrs. J. H. COMSTOCK.

Finest line of tablet and composition books at Irvin's.
